Continuing my AWS Journey and on my way to get the Associate Trifecta, I passed the AWS Certified Developer - Associate Exam today, **AWS Certified SysOps Administrator - Associate** up next.

During my [AWS Certified Solutions Architect - Associate](#) preparation, I wasted too much time with "*the wrong*" training resources. This time I just used the [eBook](#) and [Practice Exam](#) from Tutorials Dojo. The content overlap between the Solutions Architect and Developer Exam is in my opinion around 60%, also a lot of concepts are not specific to AWS but about development in general, so no need to enter the tutorial hell and learn the same things over and over again ;)

## Summary

Earners of this certification have a comprehensive understanding of application life-cycle management. They demonstrated proficiency in writing applications with AWS service APIs, AWS CLI, and SDKs; using containers; and deploying with a CI/CD pipeline. Badge owners are able to develop, deploy, and debug cloud-based applications that follow AWS best practices.
