I don't have much time anymore to play games, probably a reason why I love gamification, that's something that raise the chances that I continuously invest time in something.

I'm looking for different ways to improve my AWS skills and found [AWS Cloud Quest](#), an open world role-playing game that teaches you how to build real-world AWS solutions using cloud concepts and exercises.

The **Cloud Practitioner** Role can be played for free, I did that already a few months ago as part of my [AWS Certified Cloud Practitioner](#) Exam prep, I loved the experience and think it really helped me to pass the Exam and strengthen my AWS knowledge. So I used AWS Cloud Quest again, this time I played the **Solutions Architect**, as one of the resources to prepare for my upcoming AWS Certified Solutions Architect Exam.

I like the way how the game is designed and guides you through a lot of different assignments and challenges you have to solve. Just take a look and give it a try if you like some gamification and fun way of learning :) You can also earn nice Credly Badges!

I've got [AWS Cloud Quest: Cloud Practitioner](#) (Archive: [\[1\]](#), [\[2\]](#)) and [AWS Cloud Quest: Solutions Architect](#) (Archive: [\[1\]](#), [\[2\]](#)) so far.

But at least the Roles **Serverless Developer** and **Security** are still on my bucket list!
