Back at 100% after passing **SCDS in SUSE Linux Enterprise Server 15** today. Right now, I'm holding all available SUSE Certifications, a milestone I reached the first time in November 2022. I'm proud about it and plan to keep up with whatever Certification SUSE is going to release next :)

This one was also very special for me because SUSE invited me as BETA tester for the Exam and I had the opportunity to provide feedback, which was used to further improve the questions and answers before the official release at SUSECON 23 in Munich.

Summary: Knowledge and understanding of various deployment methods and techniques, including manual deployment, automated installation using AutoYaST, image-based deployment using KIWI and deployment on public cloud platforms.

Skills

- Supported Platforms
- SUSE Customer Center
- Product Lifecycle
- How to Access the Product Packages
- Technology Previews
- Products, Modules and Extensions
- Deployment Infrastructure
- Deployment Services
- Manual Deployment of SLES

    - Preparation for a Manual Installation
    - Accessing a System during the Deployment
    - Remote Installation Process
- Automated Deployment of SLES using AutoYaST

    - AutoYaST Components

- Image Based Deployment of SLES Using KIWI

  - KIWI Basic Workflow

  - KIWI Build Host

  - KIWI Image Description File

  - Building KIWI Images

  - KIWI Image Maintenance
- Deployment of SLES to the Public Cloud

  - Preparation for Deployment

  - Bring Your Own Subscription or Pay As You Go?

  - Cloud Images

  - Deployment of SLES to the Public Cloud

  - Manual Instance Deployment in the Cloud

  - Automated Deployment Tools

  - Post Deployment Configuration
